To Whom It May Concern,

Letter of Recommendation: Soham Sharma

I am writing to highly recommend Soham Sharma HKID: F761487(6) for any future professional or academic opportunities. Soham recently completed an internship at CarryAI Company Ltd, where he distinguished himself during a uniquely rigorous and demanding R&D cycle.

Our approach to internships this semester was highly immersive. We bypassed standard introductory tasks, giving our interns an in-depth look into our actual projects and R&D challenges, and assigning them real-world, difficult tasks as if they were full-time AI engineers.

Out of hundreds of students, only a select few demonstrated a truly profound passion for the disruptive technologies we are building. Soham was immediately a standout. I was deeply impressed by the sophisticated, complex projects he had already built prior to joining us, which gave us the confidence to entrust him with highly challenging work.

Technical Contributions and Achievements:

- **Advanced SLAM Development:** Soham played a critical role in building a robust **SLAM (Simultaneous Localization and Mapping)** application from the ground up.
- **Hardware Integration:** He successfully integrated and worked with complex sensor arrays, specifically handling data from **depth cameras and LiDARs**.
- **Edge Computing Optimization:** He tackled the rigorous challenge of deploying these heavy processing tasks on **edge-based, limited-CPU Single Board Computers (SBCs)**, requiring highly optimized code and architectural efficiency.

Professional Assessment & Soft Skills:

Throughout this development process, we naturally encountered numerous technical difficulties. What impressed me most about Soham was not just the prior knowledge and experience that enabled him to build alongside our core team, but his incredible perseverance and passion. He possesses a rare ability to deeply understand system constraints and creatively cope with severe hardware limitations without losing momentum.

Soham was an absolute pleasure to have on the team. We are incredibly grateful for the wonderful days he spent with us, and we truly valued the opportunity to learn, problem-solve, and explore these technical frontiers together. He has my highest recommendation, and I am confident he will be a tremendous asset to any advanced engineering team.

Sincerely,

Samson Li
